

1 Introduction

The 2nd EurekaBuild workshop and brokerage event took place in Oslo, Norway on May 7-8 2007. The theme for this event: **ICT and new integrated processes.**

This was one in a series of planned workshops aiming at launching Eureka projects within the European construction sector. EurekaBuild, www.ectp.org/eurekabuild is an umbrella under Eureka, www.eureka.be initiated by ECTP (The European Construction Technology Platform, www.ectp.org) as a complementary instrument to the EU FP7 programs. The purpose is to promote project initiatives of the more close-to-market, bottom-up kind with national funding and created through improved communication and cooperation between industry and researchers in the participating European countries.

The EurekaBuild workshops are organised by the National Technology Platforms within ECTP, and closely coordinated with the relevant Focus Areas.

The Oslo workshop was organised by the Norwegian Construction Technology Platform, www.ectp-norway.no in close cooperation with Innovation Norway, www.invanor.no, Nordic Innovation Centre, www.nordicinnovation.net, the ECTP Focus Area #7 (Processes and ICT) and the National Technology Platforms in the other Nordic countries.

This report summarises the workshop, presenting the workshop program, the oral and written contributions, the list of participants, the project ideas discussed, and finally a summarising by the organisers as to the lessons learned.
